CINNERATE

Fungicide / Miticide / Insecticide

**Dual Benefit of Mite
& Scale Control**

**Low Impact On Beneficial
Predators**

**Cinnerate is effective
against:**

Mites: Rust, Red, Two Spot, -
Scale: San Jose, Red, Citricola
Diseases: Powdery mildew:
Botrytis spp., Rust spp.

*See product label for complete
list of pests controlled*

High Potency for Fast Knockdown Control

Cinnerate is a fast acting knock down miticide, fungicide that goes to work immediately to stop disease, immobilize and kill mites, and other insects. Mite activity stops within 1-2 hours of applications with control as high as 98 percent within 24 hours. Cinnerate controls all life stages of scale.

Low Dose Easy to Use Formulation

Cinnerate is a clear liquid formulation simplifying mixing and handling. The innovative formulation provides high levels of control with low applications rates(13-30 oz/100 gallons), a high degree of crop safety. Cinnerate leaves no visible residue, and can be used up to and during harvest.

Multiple Modes of Action

Cinnerate causes immediate mite and insect death by asphyxiation, through sealing the spiracles, disrupting the nervous system, and interfering with the glucose uptake and utilization. Resulting in effective control of all mite life stages including eggs and reduces insect's ability to develop resistance.

CINNERATE

- **Fast Acting**
- **0-hour REI**
- **0-Day PHI**
- **No Visible Residue**
- **No Sulfur Restrictions**
- **Resistance Management**
- **Exempt from food tolerance – No MRLs**
- **NOP Organic / OMRI listed**
