

AVIV™

ADVANCED MICROBIAL FUNGICIDE

Powdery Mildew Control, Plus Improved Quality to Prevent Post-harvest Disease Loss

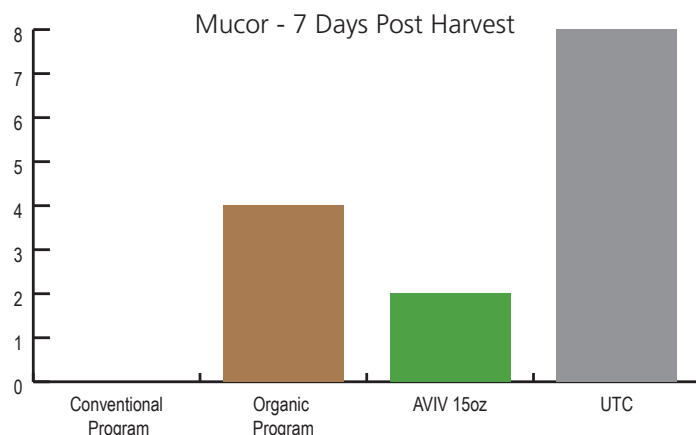

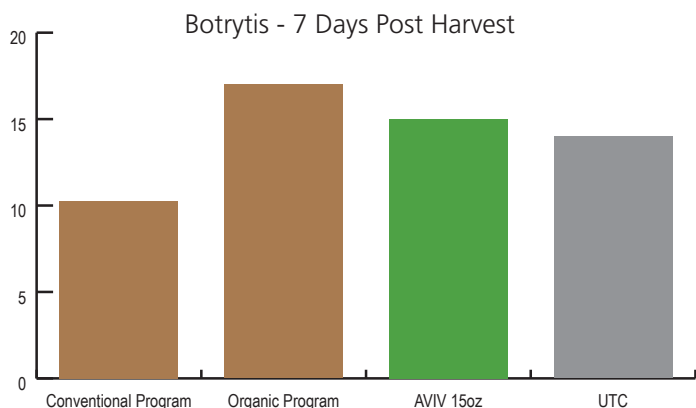

Based on the patented strain of *Bacillus subtilis* IAB/BS03, AVIV™ is an advanced microbial fungicide that delivers broad spectrum disease control both in soil and on plant surfaces.

Use AVIV for control of powdery mildew in berry crops where it performs better than other biologicals and as well as conventional options. With a four-hour restricted entry interval and zero-day pre-harvest interval, AVIV has the added benefit of being a pre-harvest treatment for the prevention

of post-harvest storage diseases. And, with AVIV, you get a high degree of compatibility with other disease control products in your program without any phytotoxicity issues.

AVIV fungicide's biological nature makes it the ideal complement to both organic and conventional production programs. With no MRL requirements AVIV can easily be integrated into production programs to improve your disease control results. AVIV microbial fungicide - the choice is clear.

A Pre-harvest Application of AVIV Improves Berry Quality to Prevent Post-harvest Diseases

Pacific Ag Research 2015; Conventional: Rovral – 1.5 pt/a (A) + Elevate 50 WDG – 1.5 lb/a (BDF) + Switch 62.5 WG – 11 oz/a (CEG) + Spreader 90 – 0.25% v/v (A-G); Organic: Serenade Optimum – 20 oz wt/a (A-G) + Spreader 90 – 0.25% v/v (A-G); AVIV: 15 oz (A-G)
