

AVIV™

Control Powdery Mildew in Grapes Better than the Competition

Based on the patented strain of *Bacillus subtilis* IAB/BSO3, AVIV™ is an advanced microbial fungicide that delivers broad spectrum disease control both in soil and on plant surfaces.

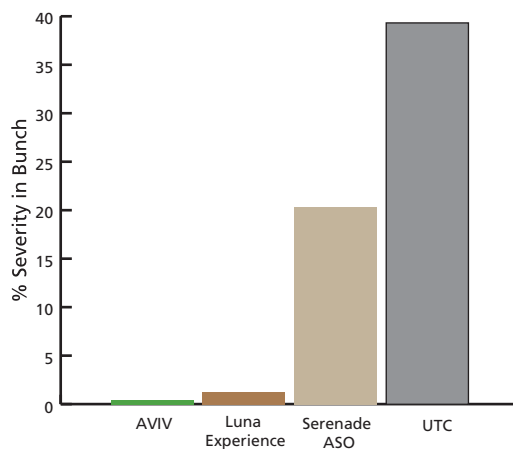

Use AVIV for control of Powdery Mildew in grapes better than other biologicals and as good as many conventional options. With a four-hour restricted entry interval and zero-day pre-harvest interval, AVIV has the added benefit of

controlling common fungal disease in grapes, including *Botrytis*.

AVIV fungicide's biological nature makes it the ideal complement to both organic and conventional production programs. With no MRL requirements AVIV can easily be integrated into production programs to improve your disease control results.

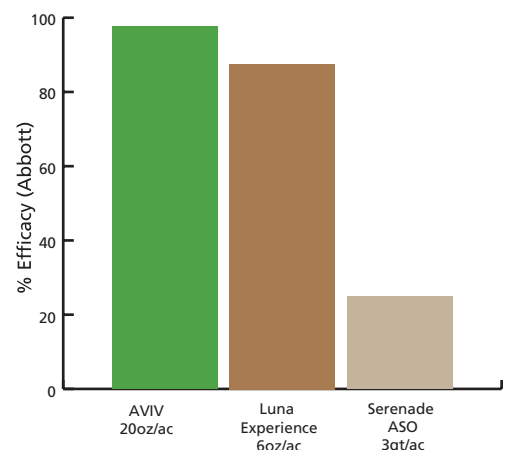

AVIV microbial fungicide – the choice is clear.

AVIV Controls Powdery Mildew in Grapes Better than the Competition at High Disease Incidence

US1746, Table Grape, Fowler, CA - Sawtooth Ag Research Thompson Seedless – 24DAF, water volume = 100 gpa

AVIV Controls Powdery Mildew in Grapes Better than the Competition at High Disease Incidence*

*24DAF - 100% disease incidence in UTC. US1746, Table Grape, Fowler, CA - Sawtooth Ag Research, Thompson Seedless, water volume = 100 gpa
